List of Tables

1	Descriptive Statistics Harvest Volume	2
---	---------------------------------------	---

1 Data Appendix

1.1 Dependent Variable

Harvest volume for Logs and bolts, Pulpwood, and FuelWood for the years 1990-2019 are reported by the Forestry Department.

Table 1: Descriptive Statistics Harvest Volume

Category	Mean	Minimum	Maximum	Std
FuelWood (Volume/hect)	2.569627	0.0000050	10.66888	4.209807
Logs (Volume/hect)	25.325617	0.0002261	141.95222	37.566833
PulpWood (Volume/hect)	3.681445	0.0002915	26.02318	3.760030

2 Regression Models

3 Regression Results and Significance Levels

4 Out-ofSample Prediction Accuracy

5 Nonlinearities and Climate Change Impacts

6 Cross-section versus Time Series

7 Temporal Subsets

8 Temperature - Precipitation Interaction

9 Growing Season and Time Separability

10 Year Fixed Effects

11 Linear Within-Day Temperature Interpolation

12 Uniform Climate Change Scenarios
