

Nonlinear Temperature Effects on Forestry Harvest Volume in Quebec, Canada: Implications for Log & Bolts, Pulpwood, and Firewood Production under Climate Change*

Jinqi Guo Young Joseph Chung Steven

Sep 1, 2023

Abstract

An overview of the study’s objectives, methods, key findings, and implications, condensed into a brief summary.

Table of contents

1	Introduction	3
1.1	Background on Quebec’s forestry industry and its economic importance.	3
1.2	Brief mention of climate change impacts on forestry globally.	3
1.3	Objective and scope of the current study.	3
2	Data and Methods:	3
2.1	Data Sources:	3
2.2	Methodological Approach:	3
3	Results	3
3.1	Temperature Thresholds:	3
3.2	Projected Harvest Volume Changes:	3
4	Discussion	3
4.1	Comparison with Crop Findings:	3
4.2	Implications for Quebec’s Forestry Industry:	3
4.3	Potential Adaptation Strategies:	3
5	Conclusion	3
5.1	Summary of key findings.	3
5.2	Suggestions for further research, possibly expanding the scope to include other climate variables or regions.	3

List of Figures

List of Tables

1 Introduction

1.1 Background on Quebec's forestry industry and its economic importance.

1.2 Brief mention of climate change impacts on forestry globally.

1.3 Objective and scope of the current study.

2 Data and Methods:

2.1 Data Sources:

2.2 Methodological Approach:

3 Results

3.1 Temperature Thresholds:

3.2 Projected Harvest Volume Changes:

4 Discussion

4.1 Comparison with Crop Findings:

4.2 Implications for Quebec's Forestry Industry:

4.3 Potential Adaptation Strategies:

5 Conclusion

5.1 Summary of key findings.

5.2 Suggestions for further research, possibly expanding the scope to include other climate variables or regions.
